Chris,

Sorry for the delay in getting back to you on this.

If these are the only plugs that we are having a problem with, then I am OK with leaving them out of the skidtubes since the holes that are being plugged are so small. Seems weird to me that we've suddenly started to have a problem, but whatever.

Can I assume from your email that the rest of the plugs are OK?

Regards,  
David

David,

When installing D3492-045 plugs into the 3/16" holes for D4168-043 Skidtubes (AS 350), the o-rings are ripping. See the attached photos for one of the plugs. The effected hole is section AU-AU from the attached pdf page. This is causing some of the plugs to fall out when handling them.

I tried a new plug (D3492-5) and new o-ring (NAS1611-005) with an unpainted D3890-5 spacer (0.197 ID) and could not get it installed without the same ripping. We enlarged a spacer to 0.206" ID and put a 0.220"x45deg c'sink (about the OD of the o-ring) hoping it would force the o-ring into the hole. It ripped less, but the o-ring just doesn't want to compress that much. Some of the o-ring always wants to squeeze out and it gets sheared off when you try to force the plug in (it takes a lot of force to get it in).

I don't know how we've been doing this in the past. We only noticed the problem this time during final packaging of the latest batch.
